## Status of POLYVANTIS Product(s) with respect to REACH Registration

**Please note carefully that this declaration ONLY applies to customers that have purchased a product from POLYVANTIS F&S B,V.  
POLYVANTIS customers that ship POLYVANTIS products into the European Union (EU) as importer of record are themselves responsible for any obligations under REACH.  
POLYVANTIS will not act as or appoint an Only Representative.**

**REACH** Regulation EC 1907/2006 is the European legislation aimed to regulate the **Registration, Evaluation, Authorization and Restriction of Chemical Substances**. Under REACH chemical substances produced in the EU or imported into the EU at a volume >1000 kg per year need to be registered with ECHA, the European Chemicals Agency. The purpose of this Regulation is to ensure a high level of protection of human health and the environment, including the promotion of alternative methods for assessment of hazards of substances, as well as the free circulation of substances on the internal market while enhancing competitiveness and innovation.

The POLYVANTIS REACH program is designed to support continued availability of finished goods (polymer preparations, film, and sheet) for POLYVANTIS customers in Europe.

- (i) Main focus of our REACH program is on the registration of substances, such as intermediates and monomers, for the manufacture of resins and compounded polymer mixtures, of which POLYVANTIS is the producer or the importer of record.
- (ii) POLYVANTIS is pleased to inform you that POLYVANTIS has successfully completed the registration of those substances for which POLYVANTIS had a registration deadline of November 30, 2010, May 31, 2013, and May 31, 2018. For selected substances POLYVANTIS took the initiative to act as Lead Registrant.
- (iii) POLYVANTIS will continue to work closely with external REACH experts to ensure registration dossier accuracy and completeness. These resources will not only facilitate timely dossier availability and submission but will also provide additional REACH legislative expertise.
- (iv) POLYVANTIS will extend its global vendor collaboration program to make certain that also for sourced substances timely REACH compliance is ensured so that POLYVANTIS as a downstream user in future will have continued access to compliant sourced raw materials.
- (v) POLYVANTIS committed to the CEFIC REACH Action Plan for Review/Improvement of Registration Dossiers. The Action plan will encourage and support companies in evaluating existing registration dossiers and implement follow up actions, while keeping close contact with ECHA and its strategy.

- (vi) Unfortunately POLYVANTIS is not in a position to communicate registration program details at a substance level since this potentially could imply revealing business confidential details of POLYVANTIS material technology.
- (vii) Should a POLYVANTIS customer ship a POLYVANTIS product into the EU as importer of record, the customer will have to fulfil its own REACH obligations. POLYVANTIS will not act as nor will it appoint an Only Representative.
- (viii) POLYVANTIS has meanwhile completed a CLP (Classification, Labelling and Packaging, Regulation EC 1272/2008) notification to ECHA for those substances from its raw material portfolio to date impacted by the CLP regulation.

While POLYVANTIS will continue to update its customers regarding implementation of our REACH program throughout future registration phases, our customers remain responsible for complying with their own REACH obligations.

Additional information and guidance regarding your potential obligations under REACH is available at <http://echa.europa.eu/>.

In summary, POLYVANTIS considers itself in compliance with both the REACH Regulation EC 1907/2006 as well as the CLP Regulation EC 1272/2008. This will enable continued availability of compliant POLYVANTIS products for its customers.

or corrosion inhibitors as an important component to achieve certain functional properties required for the end use.

As informed by our suppliers, during manufacturing process of these additives the ovine or bovine originated material is exposed to high temperatures and undergoes rigorous chemical reactions exceeding the stringent requirements mentioned in the "Opinion of the Scientific Steering Committee of Feb. 19-20, 1998" or "Note for Guidance on Minimizing the Risk of Transmitting Animal Spongiform Encephalopathy Agents via Medicinal Products" of March 25 1999 (CPMP/BWP/1230/98) respectively and in the document WHO/CDS/VPH/95.145. These conditions are considered to be sufficient to inactivate Genetically Modified Organisms (GMO) &/or Transmissible Spongiform Encephalopathies (TSE) &/or Bovine Spongiform Encephalopathy (BSE) transmitters.

Further, during the manufacturing process of these resins, compounds and sheets at POLYVANTIS, the ovine or bovine material is further exposed to high temperature/pressure, which is considered (the fact of being exposed) to be sufficient to inactivate any active prions present.

In view of the repeated chemical/heat/pressure treatments that the additives undergo in the various successive process steps of manufacturing of the POLYVANTIS Products, it is considered that the POLYVANTIS Products do not pose any threat in the context of GMO and/or TSE/BSE. Furthermore, we believe that POLYVANTIS Products do not pose any risk of transmitting animal spongiform encephalopathy agents via human and veterinary medicinal products (per the Note on Guidance EMA/410/01 rev.3) (2011/C 73/01).

### **Status of POLYVANTIS Product(s) with respect to REACH restriction on intentionally added Synthetic Polymer Micro-particles (REACH XVII Entry 78 Microplastics)**

On 25 September 2023, The European Commission introduced a sale ban of microplastics, REGULATION (EU) 2023/2055, in a range of products including cosmetics, household, industrial detergents, household and cleaning products or granular infill for use on synthetic sports surfaces with a sector-specific transition period.

The adopted restriction uses a broad definition of microplastics – it covers all synthetic polymer particles below five millimeters that are organic, insoluble and resist degradation, however only microparticles added intentionally to mixtures (and products) are in scope from the sale ban.

Manufacturers and industrial downstream users of synthetic polymer microparticles in the form of pellets, flakes, and powders used as feedstock in plastic article manufacturing at industrial sites are exempt from the sales ban (Paragraph 4(1)).

The restriction still introduces certain provisions to Manufacturers to provide (1) instructions for use and disposal (from 17 October 2025) to industrial downstream users and (2) reporting obligations to the Authorities related to pellet losses to the environment (31 May 2026).

Please be aware that the Article Safety Data Sheet as supplied by POLYVANTIS already provide instructions for use and disposal explaining how to prevent releases of plastic resins and compounds to the environment.

This declaration applies to the material as it leaves its production facilities. It does not cover any substance(s) or preparation(s) subsequently added and/or material processing or article fabrication further down in the supply chain.
