

PVdF 2L

Coastal Primer

by Alucoil®

Protective film
Aluminium + PVdF 2L with COASTAL PRIMER
Core⁽¹⁾
Aluminium

⁽¹⁾ Three possibilities:

- a) Polyethylene core (larson®)
- b) Mineral FR core (larson®)
- c) Aluminium Honeycomb core (larcore®)

PVdF 2L COASTAL PRIMER is a special coating as a result of a 17 year experience and innovation in the manufacture of aluminium composite panels with projects supplied over 50 countries.

PVdF 2L COASTAL PRIMER is applied over the whole range of PVdF 2 layer system standard colours, and optional in other finishes.

PVdF 2L COASTAL PRIMER is a special primer treatment for aggressive environments of a total thickness of 31 microns applied in combination with a PVdF Kynar 500 70%. All together applied over a 5005 H-22 marine aluminium alloy which enlarges the lifespan of the panel. It protects specially the edges and folding points, the most delicate in marine environments.

PVdF 2L COASTAL PRIMER has a better behaviour with regards to scratches.

PVdF 2L COASTAL PRIMER can give the panel a warranty over 10 years in projects located on the seaside, avoiding blistering or paint delamination in marine environments without having to use a 3 layer PVdF.

All these features have no impact on the price.
