Thermoplastic Sheets for Construction, Industry, Advertising and Agriculture

20/2/22

PALBOARD™ - Environmental Declaration

1. Palboard sheets are fully recyclable. Once the sheets complete their service life, they can be sent back to Palram and Palram will reuse 100% of the PVC material to produce new sheets.
2. The production process of Palboard sheets includes the usage of up to 50% recycled PVC content.
3. Palboard is a co-extruded sheet. The co-extrusion technology allows Palram to use more resin from renewable resources, while maintaining high quality surface appearance.
4. Palboard is a durable material produced to last years in service. This means that display projects made with Palboard will last longer when compared with other display materials, which in turn means lower environmental impact.
5. Palboard conforms with the REACH regulation for avoidance of hazardous materials.
6. Palboard complies with the requirements of the European Union's RoHS-3 Directive regarding concentrations of heavy metals, flame retardants and phthalates.
7. For general information please refer to Palram's [Environmental Commitment](#).

Tamir Horesh

VP Marketing, Palram
