

## Chemical Resistance Ratings Table 1 and Table 2

### EXPLANATION OF RATINGS

E (e)<sup>1</sup> = Excellent

The plastic was unaffected in any way for the duration of the test

G (g) = Good

A very slight clouding or discoloration took place. Expected life . months to years.

F (f) = Fair

Moderate effect. Slight etching, some discoloration, possibly some dimensional changes or weight change. Expected life . weeks to months.

P (p) = Poor

Considerable change. Expected life . days.

N (n) = Not Recommended

Severe attack. Plastic became soft in a few hours, and was unusable within a few days or by the end of the test.

S (s) = Solvent

<sup>1</sup>Lower case letters express opinions.

**TABLE 1 . General chemical resistance characteristics  
at room temperature**

**NOTE: refer to ratings, front page, before using Table 1.**

Chemical Class	Polystyrene resins		ABS Resins
	General Purpose Grades	High Impact Grades	
Acids, Inorganic weak strong strong oxidizing	E	G	G
	E	G	G
	F	F	N
Acids, Organic weak strong	E	E	G
	G	E	G
Alcohols	E	G	F
Aldehydes	N	N	N
Amines aliphatic aromatic	E	E	G
