

Technical Datasheet – Polystyrene Virgin

DESCRIPTION

Polystyrene Virgin is a normal flowing, high impact grade that is especially suitable for blends with a high proportion of general purpose polystyrene. It is suitable for all kinds of thermoformed packaging.

FEATURES

Suitable for blending with high proportions of GPPS
UL 94 HB

APPLICATIONS

Food packaging and disposables
Cups
Cutlery
Blends with GPPS

Property, Test Condition	Standard	Unit	Values
Rheological Properties

PROCESSING

Polystyrene Virgin can be injection molded at temperatures between 180 and 260°C, and recommended mold temperatures between 10 and 60°C. Extrusion temperatures should not exceed 240°C.

PRODUCT SAFETY

During processing of PS small quantities of styrene monomer may be released into the atmosphere. At styrene vapor concentrations below 20ppm no negative effects on health are expected. In our experience, the concentration of styrene does not exceed 1 ppm in well ventilated workplaces – that is were five to eight air changes per hour are made
